ARC
Technology
Anti-Reflective Coating

What will ARC technology lenses do for me?

- Clearer, crisper vision. You will see more clearly underwater and objects in the distance will become more defined and acute.
- Increased contrast and clarity.
- Objects will have enhanced appearance underwater.
- Reduces eyestrain, glare, and prevents ghost images on the viewing area of the lens.
- An absolute must for night diving, limited visibility conditions, and underwater photographers.
